# YO xxM750

## Waterborne clear one - two pack topcoat

### Mani properties:

| Excellent hardness and touch feeling | Excellent matt level uniformity |
|--------------------------------------|---------------------------------|
| High level of transparency           | Easy to apply                   |

#### Versions:

| 00M750 | 2 gloss clear  |
|--------|----------------|
| 15M750 | 15 gloss clear |
| 40M750 | 40 gloss clear |

| 05M750 | 5 gloss clear  |
|--------|----------------|
| 20M750 | 20 gloss clear |
| 50M750 | 50 gloss clear |

| 10M750 | 10 gloss clear |
|--------|----------------|
| 30M750 | 30 gloss clear |
| 70M750 | 70 gloss clear |

glass

Recommended use: · Kitchen doors Application method: by spray

To apply on waterborne basecoat: ready to use as one pack product. Only if necessary, thin with tap water and/or add agent YCM407. If used as two pack product, fot gloss levels above 10 add hardener YCM402 or YCM404 at 5-10% ratio, for gloss under 10 add hardener YCM400 or YCM401 while well stirring with mixer.

• Panels

## **Product** preparation:

To apply on glass surface: add YC M419 (we suggest to previously blend YCM419 with same quantity of water) at 2% ratio while mixing for 1-2 min with mixer. Then let product rest for some minutes before its us, so that foam can be released.

Pigmented pastes, powders and dyes must be perfectly dispersed into product otherwise final result may be compromised. If particles are not well dispersed proceed with filtering.

## Substrate preparation:

Wood treated with basecoat: Sand basecoat with 320-400 paper grit. YO xxM750 can be applied on waterborne PE or UV basecoats. Its application on Nitrocellulose and Polyurethane base coats is not recommended Glass surface: clean very well and avoid making fingerprints, oil stains, water drops.

Application instructions: To obtain the best result, avoid adding tap water. It is recommended to choose the most suitable gun setup. Below are some guidelines for spray application :

|                  | Thinning ratio % | Nozzle  | Air Press. | Coating Press. |
|------------------|------------------|---------|------------|----------------|
| Conventional gun | 2 - 4            | 2 - 2,2 | 3 - 4      | <del></del>    |
| Airmix           |                  | 11      | 0 - 2      | 80 - 110       |
| Airless          |                  | 11      |            | 120 - 150      |

The use of pre atomizers and pre heaters (with temperatures between 30 and 40 °C) ensure better application constancy throughout the year. Drying should be carried out in areas with good air ventilation (the whole volume of air of the drying room should be renewed every 15-20 minutes.

For further information regarding the use of waterborne products, please refer to the Main Guide

## **General remarks**

- Mix well before use.
- If properly stored at temperatures between 5 and 35°C, shelf life is 12 months
- Room, product and substrate temperatures must be <u>above 15°C</u>, during application. Coatings applied at lower temperatures will show chemical and mechanical properties lower than standard performances that can be normally achieved.
- Coating left overs (washing waters, waters from spray booths, used coatings) must be disposed of according to local regulations. Never dispose of residues directly into drains.
- Application tools must be cleaned with water after use. When dry films must be removed, AY---M460, special detergent should be used, letting it work overnight and then cleansing with water
